MOBILE
INVESTIGATIONS
FORENSIC SOFTWARE FOR IOS AND ANDROID

Mobile Device Investigator™

Give your front-line agents and investigators the power to quickly scan and analyze iOS and Android smartphones and tablets with ADF's automated, intelligent, configurable, mobile investigation software.

10,000+ Global Users Rely on ADF to Speed Investigations

| **+ iOS FORENSICS** | **+ ANDROID FORENSICS** | **+ ANALYSIS & REPORTING** |

COLLECT

Scan unlocked iOS and Android devices (smartphones and tablets) for rapid evidence collection to speed your investigations with out-of-the-box or custom search profiles.

- Recover call records, messages, saved contacts and calendar data
- Recover Web browsers, browsing history, download history, search terms, form data, bookmarks and cache contents
- Recover WiFi connections, installed applications and Android user accounts
- Recover pictures, videos, audio files, documents and user-defined file types
- Recover database files and Property Lists for later review
- Identify files or artifacts containing terms related to child exploitation
- Categorize files that match Project VIC or CAID datasets in real-time

- Search for specific information using keywords, regular expressions, hash values and PhotoDNA

- Comprehensive logical backup using default platform backup protocol, backup agent and media transfer protocol

- Acquire up to 4GB of data per minute

ANALYZE

Quickly go through the recovered data with the powerful results viewer to explore gigabytes of information in minutes.

- Easily navigate through the recovered files and artifacts

- Quickly eliminate pictures that are not photographs

- View all files and artifacts in a single timeline view

- View all similar apps on a single standardized view for faster review

- View recovered pictures in an easy to navigate and configurable gallery view

- View videos using DEI's comprehensive video preview and frame extraction capabilities

- View pictures and videos organized by visual classes such as people, faces, currency, weapons, vehicles and indecent pictures of children

- View links between files of interest and user activities such as recently accessed files, downloaded files, attachments and more

- Filter search results with sorting and search capabilities (dates, hash values, tags, text filters and more)

- Add tags and comments to document your findings

REPORT

Easily create comprehensive reports to highlight your findings and select the format most suitable for your audience.

- Precisely select which files and artifacts to export

- Customize your report to show specific columns and redact pictures

- Present information in a table or list

- Include original files or previews only

- Export to other forensics applications with Project VIC or CSV formats

- Share scan results with a portable standalone viewer

- HTML and PDF reporting options
